

# PROCEEDINGS

### **Proceedings**

The Pure and Applied Chemistry International
Conference 2020 (PACCON2020)
"Chemistry for Catalyzing Sustainability and Prosperity"
February 13-14, 2020

af

IMPACT Forum, Muangthong Thani, Nonthaburi, Thailand

Organized by

The Chemical Society of Thailand under the Patronage of Professor Dr. Her Royal Highness Princess Chulabhorn Krom Phra Srisavangavadhana

In association with

Department of Chemistry, Faculty of Science and Technology

Thammasat University

Proceedings of the Pure and Applied Chemistry International Conference 2020 [PACCON2020]

Editor-in-Chief Peerasak Paoprasert

Prepared by Department of Chemistry, Faculty of Science and Technology,

Thammasat University

1<sup>st</sup> Edition May 2020 (available in PDF file only)

Editorial Information

Editor-in-Chief Peerasak Paoprasert

Editorial Board see PACCON2020 Scientific Committee

Editorial Staff Chanatip Samart

Napaporn Youngvises

Sa-ad Riyajan

Yuthana Tantirungrotechai Boonchoy Soontornworajit Panumart Thongyoo

Natee Sirisit Jatuporn Teerakul

#### SCIENTIFIC SESSIONS:

AC Analytical Chemistry

<u>Table of content</u> <u>Proceedings</u>

CB Chemical Biology and Natural Products

^

3 of 5 1/14/2021, 2:43 PM

Content	Page
Development of paper-based colorimetric sensor for determination of	AC1-AC7
Human Papillomavirus DNA	
Sarida Naorungroj, Prinjaporn Teengam, Tirayut Vilaivan,	
Orawon Chailapakul	
Development of paper-based biosensor using pyrrolidinyl PNA for	AC8-AC14
screening of Hepatitis C virus DNA	
Narathorn Nisab, Prinjaporn Teengam, Tirayut Vilaivan,	
Orawon Chailapakul	
Multiplexed simultaneous metal measurements using janus	AC15-AC21
electrochemical paper-based analytical devices in particulate matter	
Jaruwan Mettakoonpitak, Sookpichaya Charrunchon, John Volckens,	
Charles S. Henry	
Development and validation of HPLC method for simultaneous	AC22-AC28
quantitative determination of amlodipine besylate and valsartan	
Narisa Rukdee, Sutthikan Sonchai	
Chemometrics-assisted UV spectrophotometric methods for simultaneous	AC29-AC34
determination of amlodipine besylate and valsartan in	
pharmaceutical tablets	
Nidthida Archeepsudjarit, Supavadee Timum	
Quantitative determination of N-nitrosodimethylamine by HPLC method	AC35-AC40
Chutima Phechkrajang, Chaweewan Suwanvecho, Suttikan Sonchai,	
Narisa Rukdee, Nidthida Archeepsudjarit, Supavadee Timum	
Enantiomeric separation of chiral amines by GC using acetylated beta-	AC41-AC46
cyclodextrin as stationary phase	
Suchada Muangsri, Aroonsiri Shitangkoon	
Method development for determination of brominated flame retardants in	AC47-AC51
high-impact polystyrene using X-ray fluorescence spectrometry	
Polwat Singhasemanont, Apichat Imyim	
Development of Pb <sup>2+</sup> electrochemical sensor using poly	AC52-AC56
(diallyldimethylammonium chloride) @graphene dispersed chitosan	
modified glassy carbon electrode	
Weenus Chaiprasert, Anchana Preechaworapun, Tanin Tangkuaram	
Fabrication of bimetallic of platinum-gold at	AC57-AC61
poly-(diallyldimethylammonium chloride) modified graphene for	
application on the choline biosensors	
Nuenghathai Chaiya, Anchana Preechaworapun, Tanin Tangkuaram	
The qualitative analysis of gamma-oryzanol in rice bran oil by	AC62-AC67
using Raman spectroscopy	
Pawida Sunghad, Chutima Phechkrajang, Pattamapan Lomarat, Somnuk	
Bunsupa, Bhanubong Bongcheewin, Natthinee Anantachoke	

Optimization of acrylamide analysis in flour sample by high performance	AC68-AC73
liquid chromatography equipped with UV detector	
Konkanok Jamsawang, Tinnakorn Tiensing	
Development and validation of a liquid chromatography tandem	AC74-AC79
mass spectrometry method for the determination	
of 11-nor-9-carboxy-delta(9)-tetrahydrocannabinol in urine	
Sirijit Jongjityotin, Anongphan Junkuy, Pongruk Sribanditmongkol,	
Chaturong Kanchai	
Cost-effective transparency sheet-based analytical device for	AC80-AC84
colorimetric detection of folic acid	
Ananyaporn Anekrattanasap, Weena Siangproh	
Detection of persulfate by gold nanorods multicolor sensor	AC85-AC89
Petrada Chunnuan, Charoenkwan Kraiya, Luxsana Dubas,	
Wanlapa Aeungmaitrepirom	
Transparency sheet-based colorimetric device using modified	AC90-AC95
silvernanoparticles for the simple, sensitive and selective detection of	
calcium (II) ion	
Paweenar Duenchay, Wijitar Dungchai	
Sensitive amperometric xylose detection with pyranose-2-oxidase-modified	AC96-AC101
platinum electrodes	
Nuttanun Kutrakul, Pangrum Punthong, Thanyaporn Wongnate,	
Pimchai Chaiyen, Albert Schulte	
Synthesis of gold nanoparticles-embedded bacterial cellulose nanopaper	AC102-AC107
for colorimetric detection of hydrogen peroxide	
Pongpichet Srikritsadawong, Munlika Prommajun, Aurachat Lert-itthiporn,	
Saranya Phunpruch, Nathawut Choengchan	
Determination of arsenic (III) in soil using membraneless vaporization unit	AC108-AC113
coupled with flow based system	
Supattra Yooram, Piyada Jittangprasert, Kriangsak Songsrirote,	
Nuanlaor Ratanawimarnwong	
Spectrophotometric determination of gluconic acid in skincare products	AC114-AC119
Sophika Srihirun, Nuanlaor Ratanawimarnwong	
Chitosan cryogel incorporated with Prussian blue modified screen-printed	AC120-AC124
carbon electrode for amperometric histamine biosensor	
Natha Nontipichet, Suntisak Khumngern, Panote Thavarungkul,	
Proespichaya Kanatharana, Apon Numnuam	
Simple analytical method based on thin-layer chromatography imaging	AC125-AC128
with mobile phone for determination of aflatoxin	
Pantakarn Singchai, Jaroon Jakmunee, Somkid Pencharee,	
Chanida Puangpila	

Nutchanard Tumtamai, Sirikwan Ponprateep, Siritron Samosorn, Piyada Jittangprasert  Pulsed amperometric detection of payload release from polymer nanoparticles  Piyanuch Vibulcharoenkitja, Yupaporn Niyo, Naruphorn Dararatana, Farzad Seidi, Albert Schulte, Daniel Crespy  Flow injection system for detection of albumin based on gold nanoparticles-catalyzed luminol chemiluminescence  Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarmwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarmwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purtusarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis	Determination of cordycepin and adenosine in Cordyceps militaris by	AC129-AC133
Pilyada Jittangprasert  Pulsed amperometric detection of payload release from polymer nanoparticles  Piyanuch Vibulcharoenkitja, Yupaporn Niyo, Naruphorn Dararatana, Farzad Seidi, Albert Schulte, Daniel Crespy  Flow injection system for detection of albumin based on gold nanoparticles-catalyzed luminol chemiluminescence  Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathawesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthave Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis	high-performance liquid chromatography	
Pulsed amperometric detection of payload release from polymer nanoparticles  Piyanuch Vibulcharoenkitja, Yupaporn Niyo, Naruphorn Dararatana, Farzad Seidi, Albert Schulte, Daniel Crespy  Flow injection system for detection of albumin based on gold nanoparticles-catalyzed luminol chemiluminescence  Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis		
Piyanuch Vibulcharoenkitja, Yupaporn Niyo, Naruphorn Dararatana, Farzad Seidi, Albert Schulte, Daniel Crespy  Flow injection system for detection of albumin based on gold nanoparticles-catalyzed luminol chemiluminescence Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  AC180-AC184	V 92	1 6101 1 6100
Piyanuch Vibulcharoenkitja, Yupapom Niyo, Naruphorn Dararatana, Farzad Seidi, Albert Schulte, Daniel Crespy  Flow injection system for detection of albumin based on gold nanoparticles-catalyzed luminol chemiluminescence  Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis		AC134-AC139
Farzad Seidi, Albert Schulte, Daniel Crespy  Flow injection system for detection of albumin based on gold nanoparticles-catalyzed luminol chemiluminescence  Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  AC180-AC184	-	_
Flow injection system for detection of albumin based on gold nanoparticles-catalyzed luminol chemiluminescence  Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  AC180-AC184		
Bhoonnarasa Kasetsoontorn, Nathawut Choengchan		
Bhoonnarasa Kasetsoontorn, Nathawut Choengchan  Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis		AC140-AC145
Evaluation of stepwise constant current coulometric titration with potentiometric endpoint detection for sulfite determination  Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis		
Development of test kit for naked eye detection of sulfate in soil for brick manufacture		
Chonnatee Tinala, Tinakorn Kanyanee  Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis	Evaluation of stepwise constant current coulometric titration with	AC146-AC10
Development of test kit for naked eye detection of sulfate in soil for brick manufacture  Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Ac180-Ac184 electrophoresis	potentiometric endpoint detection for sulfite determination	
Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis  AC157-AC162  AC163-AC168  AC169-AC173  AC169-AC173  AC169-AC173	Chonnatee Tinala, Tinakorn Kanyanee	
Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis  AC157-AC162  AC163-AC168  AC169-AC173  AC169-AC173	Development of test kit for naked eye detection of sulfate in soil	AC151-AC156
Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong, Nathawut Choengchan  Planar contactless conductivity detector with paper as liquid reservoir: cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis  AC157-AC162  AC163-AC168  AC163-AC168  AC169-AC173  AC169-AC173  AC169-AC173	for brick manufacture	
Planar contactless conductivity detector with paper as liquid reservoir:	Arjnarong Mathaweesansurn, Suprani Songsaeng, Rosemary Poungputh	
Planar contactless conductivity detector with paper as liquid reservoir:	Kanyapak Thangjitsirisin, Sirirat Surasen, Nuanlaor Ratanawimarnwong,	
cell geometry and applications  Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis  AC163-AC168  AC169-AC173  AC169-AC173  AC174-AC179  AC174-AC179	Nathawut Choengchan	
Nutnaree Fukana, Thitaporn Sonsa-ard, Nattapong Chantipmanee, Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis  AC163-AC168  AC169-AC173  AC169-AC173	Planar contactless conductivity detector with paper as liquid reservoir:	AC157-AC162
Prapin Wilairat, Peter C. Hauser, Duangjai Nacapricha  The magnetic solid-phase extraction for determination of lead (II) ion in contaminated wastewaters using flow injection amperometry  Sakkarin Phumma, Suthipong Puangthong, Manoch Thanomwat, Sakchai Satienperakul  Direct image analysis of gunshot residue on white fabric target: comparison with an extraction method with colorimetric paper-based method for the estimation of shooting distance  Thinnapong Wongpakdee, Supatana Buking, Phoonthawee Saetear, Nuanlaor Ratanawimarnwong, Kanchana Uraisin, Prapin Wilairat, Warawut Tiyapongpattana, Duangjai Nacapricha  Boron and nitrogen doped graphene for electrochemical detection of glutathione  Tanyapone Purttisarikorn, Wijitra Dungchai  Analysis of arsenic speciation in drinking water by capillary electrophoresis	cell geometry and applications

Electrochemical sensors based on bismuth modified poly (L-cysteine)/glassy carbon electrode (Bi-poly(L-cys)/GCE) as an environmentally-friendly electrode to detect zinc by anodic stripping voltammetry. Bi film was prepared by an in situ plating of bismuth onto the poly(L-cys)/GCE. The operational parameters such as L-cysteine concentration, bismuth concentration, preconcentration potential, and preconcentration time were optimized. Under the optimum conditions, the sensitivity of the Bi-poly(L-cys)/GCE higher than the bare GCE, Bi/GCE, and poly(L-cys)/GCE was 8.5, 6.3, and 3.6 times respectively. The linear range was 0.005-0.100 mg L<sup>-1</sup> (r = 0.999) with a detection limit of 0.002 mg L<sup>-1</sup> and a quantitation limit of 0.008 mg L<sup>-1</sup>. This method could possibly be applied to determine zinc in real samples such as food, soil, and wastewater.

**Keywords:** Anodic stripping voltammetry; Zinc; L- cysteine; Bi- poly(L- cys) / GCE; Environmentally-friendly

An environmentally-friendly electrochemical sensors based on bismuth modified poly (L-cysteine) / glassy carbon electrode (Bi/poly(L-cys)/GCE) has been developed to detect zinc ion by anodic stripping voltammetry. The Bi film was prepared by an in situ plating of bismuth onto the poly(L-cys)/GCE. The operation parameters such as L-cysteine concentration, bismuth concentration, preconcentration potential, and preconcentration time were optimized. Under the optimum conditions, the sensitivity of the modified electrodes (Bi/poly(L-cys)/GCE, Bi/GCE, and poly(L-cys)/GCE) compared with the bare GCE was 8.5, 6.3 and 3.6 times respectively. The linear range was 0.005-0.100 mg L<sup>-1</sup> (r = 0.999) with a detection limit of  $2.0~\mu g$  L<sup>-1</sup> and a quantitation limit of  $8.0~\mu g$  L<sup>-1</sup>. This method showed a potential be applied for zinc ion determination in real samples such as food, soil, and wastewater

#### 1. Introduction

Zinc (Zn) is an essential nutrient for the growth, it is an important trace element needed by plants in small amounts, but yet crucial to plant development. In plants, Zn is a key constituent of many enzymes and proteins. In the case of soil that has too much phosphorous (P) or phosphate  $(PO_4^{3-})$ , will lead to zinc deficiency in soils due to the formation of insoluble zinc phosphate  $(Zn_3(PO_4)_2)$  resulting in plants absorb less zinc. However, zinc deficiency frequently found in almost all plants and it is a common problem in agricultural land around the world.

The normally methods were used to determine zinc as atomic absorption spectrophotometry (AAS) and inductively coupled mass spectrometry (ICP-MS). There provided high accuracy, precision and sensitivity, however they require expensive instrumentation, have high operating costs with long analysis time. The anodic stripping voltammetry (ASV) technique was interesting, because it can provide a high sensitivity, low

detection limit, reduced consumption of chemical and sample, and short analysis time.<sup>3,4</sup> For determination of metal ions by ASV in the past mainly used mercury electrodes.<sup>5</sup> However, mercury is highly toxic and can be harmful to researchers, users, and the environment, therefore analytical methods that are used glassy carbon more environmentally electrode (GCE) friendly and safe for the operator are being developed based on the concept of green chemistry.<sup>6</sup> Various materials with electrical properties are improve the GCE such as Graphite.<sup>8</sup> graphene.<sup>7</sup> and multiwalled carbon nanotube (MWCNTs).9 Then polymer film modified electrodes using the electropolymerization technique have been considered to be an attractive due to its good stability, homogeneity and good adhesion to the electrode surface, insolubility, increased surface area, and more active sites. 10,11 This work to used GCE as an environmental friendly electrode, it was fabricated by electropolymerization. Bismuth film (BiF) was prepared by an in situ plating of bismuth onto the poly(L-cys)/GCE for determination

AC191

of zinc by ASV. The effect of several operational parameters were studied consisted of L-cysteine concentration, bismuth concentration, preconcentration potential, and preconcentration time, linear range, limit of detection (LOD) and limit of quantitation (LOQ), repeatability.

#### 2. Materials and Methods

#### 2.1 Materials

L-cysteine, bismuth(III) nitrate pentahydrate, zinc acetate dihydrate, and sodium acetate trihydrate were from Ajax finechem (Australia). Acetic acid, hydrochloric acid and nitric acid were from Biolabo (France). All other chemical were of analytical grade. Buffers were prepared with deionized water. Before use, buffer was filtered through a Millipore filter.

#### 2.2 Apparatus

The electrochemical techniques were carried out in a conventional three-electrode cell controlled by 910 PSTAT mini potentiostat (Metrohm Autolab B. V., The Netherlands). Glassy carbon electrode (GCE; diameter 3.0 mm) was used as the working electrode. A silver/silver-chloride electrode (Ag/AgCl) and a platinum wire were used as a Reference electrode and counter electrode, respectively. The pH measurements were performed at a S220 pH meter (Mettlertoledo, Switzerland).

#### 2.3 Fabrication of poly(L-cys)/GCE

The working electrode was first polished with 1.5, 0.5, and 0.05  $\mu$ m alumina powder and washed with deionized water. The cleaned electrode was immersed in 0.05 mM L-cys in 0.1 M HCl for 10 cycles of potential sweep between -1.2 and +1.8 V at a scan rate 0.1 V s<sup>-1</sup>. The poly(L-cys)/GCE

was then gently washed with water and dried at room temperature.

#### 2.4 ASV measurement

The three-electrode system consisted of a working electrode as modified with poly(L-cys), Reference electrode and counter electrode, were immersed in 0.10 M acetate buffer solution pH 4.5. Amount of Zn(II) and 1.0 mM Bi(III) were simultaneously deposited on the surface of the poly(L-cys)/GCE at -1.40 V for 120 s under stirring. Then the accumulation period, the stirring was stopped and after a 5 equilibrium time, the voltammogram was recorded using a square-wave potential scan between -1.40 and -0.80 V.

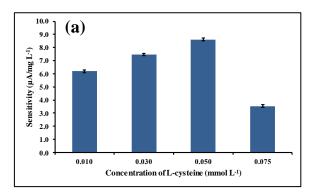

#### 3. Results & Discussion

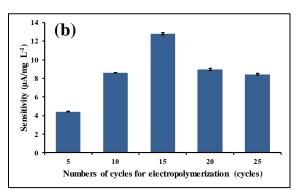

#### 3.1 Optimization of electrode modification

The effect of L-cysteine concentration was studied between 0.010 and 0.075 mM in 0.1 M HCl (Figure 1. (a)) potential scan from -1.2 to +1.8 V, 10 cycles at scan rate 0.1 Vs<sup>-1</sup> by cyclic voltammetry (CV). When tested with Zn(II) the sensitivity increase with concentration from 0.010 to 0.050 mM, and then decreased. This may be because poly(L-cys) film at GCE surface is too thick, it will have blocked the electron transfer. The concentration of L-cys at 0.050 mM was chosen to study the next parameters.

The numbers of cycles for electropolymerization of poly(L-cys) at the GCE surface were investigated, between 5 and 25 cycles (Figure 1b). After that tested with Zn(II) the sensitivity increase with number of cycles from 5 to 15, and then decreased. This may be because poly(L-cys) film at GCE surface is too thick, this caused inhibition of electron transfer on the surface. Therefore, electropolymerization of poly(L-cys) at 15 cycles was used for further studied

**Figure 1.** The effect of L-cysteine concentration (a) on the sensitivity of the fabrication electrode and Effect of the numbers of cycles for the electropolymerization (b) of the poly(L-cys) at the GCE surface. The sensitivity is slope of the calibration curve at the concentration of Zn(II) between 0.05 and 0.50 mg L<sup>-1</sup>. (ASV operation conditions: 60 s preconcentration time, -1.40 V preconcentration potential with stirring, square-wave potential scan between -1.40 and -0.50 V).

## 3.2 Optimization of the operational conditions for zinc detection

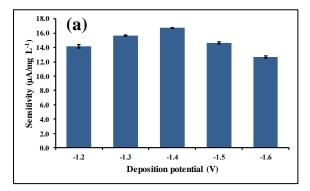

The concentrations of bismuth were studied, between 0.10 and 2.0 mM at the potential -1.4 V for 60 s in acetate buffer pH 4.5. When the concentration increase the sensitivity increased up to 1.0 mM, the increasing of Bi(III) concentration increased the Bi film on the poly(L-cys)/GCE, and resulted in the increasing of Bi-Zn alloying on the electrode surface, thus, increased the anodic peak current. However, the sensitivity decreased when the Bi(III) concentration was higher than 1.0 mM, it probably because Bi(III) film is too thick, it will hold back the Zn and affect the anodic peak current of Zn during the stripping step.<sup>14</sup>

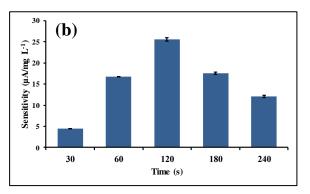

The effect of preconcentration potential was studied, from -1.20 to -1.60 V, 60 s in acetate buffer pH 5.0 (Figure 2a). The

sensitivity increased as the preconcentration potential increased, between - 1. 2 0 and - 1. 40 V, and then the sensitivity decrease when preconcentration potentials higher than - 1. 40 V, it may be because had hydrogen evolution on the electrode surface and inhibited Zn(II) acumination step to affect the sensitivity reduce<sup>15</sup>. Therefore, at -1.20 V was chosen for preconcentration potential.

The effect of preconcentration time was studied in the range of 30 to 240 s, potential -1.40 V, acetate buffer pH 5.0 (Figure 2 b). The sensitivity was increased from 30 to 120 s, and then decreased at the preconcentration time higher than 120 s, this may be because poly(L-cys) film at GCE surface is too thick, this caused inhibition of electron transfer on the surface.<sup>13</sup> Therefore, the preconcentration time at 120 s was chosen.

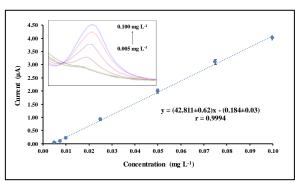

**Figure 2.** The effect of preconcentration potential (a) and The effect of preconcentration time (b) on the sensitivity of Zn(II) on the Bi/poly(L-cys). The sensitivity is slope of the calibration curve at the concentration of Zn(II) between 0.05 and 0.50 mg L<sup>-1</sup>. (ASV operation conditions: 60 s preconcentration time, -1.40 V preconcentration potential with stirring, square-wave potential scan between -1.40 and -0.50 V).

## 3.3 Calibration curve, detection limit and quantitation limit

Under the optimum conditions, the linear range was 0.005 to 0.100 mg  $L^{-1}$  (r = 0.999) (Figure 3). The detection limit (LOD) and the quantitation limit (LOQ) were calculated as 2.0  $\mu$ g  $L^{-1}$  and 8.0  $\mu$ g  $L^{-1}$ , respectively, by using the equation LOD =  $3S_a/b$  and LOQ  $10S_a/b$ ,  $S_a$  is the standard deviation of the intercept and b is the slope of the calibration curve<sup>16</sup>. Then the sensitivity of the modified electrodes (Bi/poly(L-cys)/GCE, Bi/GCE, and poly(L-cys)/GCE) compared with the bare GCE was 8.5, 6.3, and 3.6 times respectively.

#### 4. Conclusions

This work, glassy carbon electrode has been modified with poly(L-cys) and was used to detected zinc by anodic stripping voltammetry through an *in situ* plating onto the poly(L-cys)/GCE. The detection provided high sensitivity and low detection limit. The Bi/poly(L-cys)/GCE is environmentally friendly and showed a potential be applied for zinc ion determination in real samples such as food, soil, and wastewater.

**Figure 3.** The calibration curve between the anodic peak current and the concentration of Zn( II) in the range from 0. 005 to 0.100 mg L<sup>-1</sup>. The inset shows the anodic stripping voltammograms of Zn(II).
