Journal metrics

Usage

- 80K annual downloads/views

Citation metrics

- 1.9 (2021) CiteScore (Scopus)
- Q2 (2021) CiteScore Best Quartile
- 0.984 (2021) SNIP
- 0.430 (2021) SJR

Speed/acceptance

- 18 days avg. from submission to first decision
- 58 days avg. from submission to first post-review decision
- 31 days avg. from acceptance to online publication
- 32% acceptance rate

Understanding and using journal metrics

Journal metrics can be a useful tool for readers, as well as for authors who are deciding where to submit their next manuscript for publication. However, any one metric only tells a part of the story of a journal's quality and impact. Each metric has its limitations which means that it should never be considered in isolation, and metrics should be used to support and not replace qualitative review.

We strongly recommend that you always use a number of metrics, alongside other qualitative factors such as a journal's aims & scope, its readership, and a review of past content published in the journal. In addition, a single article should always be assessed on its own merits and never based on the metrics of the journal it was published in.

For more details, please read the Author Services guide to understanding journal metrics.
