Collagenase and Tyrosinase Inhibitory Activities and Stability of Facial Cream Formulation Containing Cashew Leaf Extract

... Plant extracts and essential oils are among the many natural products that are used extensively across the world because of their antioxidant activity, which protects people against a variety of ailments brought on by oxidative stress (Aggrey et al., 2019; Sonam and Guleria, 2017; Srisuksomwong et al., 2023; Zulkefli et al., 2023). Synergistic interactions between various antioxidant chemicals in mixtures of synthetic and natural antioxidants, natural products, or mixtures of various herbal extracts or plant essential oils can increase antioxidant capacity (Basavegowda and Baek, 2021; Ben Mrid et al., 2022; Sharma et al., 2020). ...

... Gallic acid was found to be the main polyphenol ingredient of *F. pinicola* extract. It has already been confirmed that this acid displays tyrosinase inhibitory activity [58]. Gallic acid can act as a substrate of tyrosinase and also can reduce dopaquinone back to levodopa (L-DOPA) through redox cycling similar to ascorbic acid [45].

... Therefore, the CSA showed inhibitory effects on the tyrosinase enzyme as a skin whitening agent. The CSA has also demonstrated tyrosinase-inhibiting activity, which could be used for cosmetic applications [11].
