**Abstract** Ethnopharmacological relevance: *Etlingera elatior* (Jack) R.H.Sm. (torch ginger) is a tropical plant traditionally used as a cat flower, culinary ingredient, and medicinal resource across Southeast Asia and other regions. However, integrated research on its multidisciplinary utilization remains limited. Aim of the study: This study aims to provide a comprehensive systematic review of scientific publications on torch ginger, including analyses of contributing countries, institutions, plant parts, chemical constituents, and research fields. Materials and methods: Publications up to 2024 were retrieved from Scopus and screened using predefined inclusion criteria based on PRISMA principles. The data were analyzed to determine publication trends and bibliometric distributions. Phytochemical and pharmacological data were also extracted. Results: Research on torch ginger
